capaNCDT // Capacitive sensors for displacement, distance & gap

High-performance measuring system (up to 8 channels)
capaNCDT 6500

- Multi-channel system with subnanometer resolution
- Analog output and digital interface (Ethernet / EtherCAT)
- Data rate digital: up to 7.8 kSa/s
- Integrated calculation function, e.g., for thickness measurements
- Modular system scalable up to 8 channels
- With internal or external preamplifier available
- Intuitive operation via web interface

The capaNCDT 6500 offers maximum resolution and precision for up to 8 sensors. Inside the rugged aluminum housing, interchangeable and freely combinable demodulator modules ensure optimal signal processing for a wide range of measurement requirements.

The demodulator version DL6530 has an integrated preamplifier. To improve accuracy or when using longer cables, one of the external preamplifiers (CP6001 or CPM6011) is used in conjunction with the DL6510 demodulator.

The system is easily configured via an integrated web interface, which can be accessed via the Ethernet port. Features such as filtering and averaging, trigger functions, data logging, digital linearization, and arithmetic calculations allow for flexible adaptation to a wide variety of measurement tasks.

[1] FSO = Full Scale Output | RMS noise referred to the end of the measuring range; static = 2 Hz, dynamic = maximum frequency response of the controller
[2] Applies to the controller only. The total linearity of the measuring channel is the sum of the controller and sensor values.
[3] FSO = Full Scale Output | The value corresponds to the slope error that occurs when a sensor is replaced without recalibration
